

SPRING GULLY'S REVERSE OSMOSIS (RO) PLANT

Australia Pacific LNG (APLNG) is committed to the commercial and beneficial use of associated water.

At our Spring Gully gas field, near Roma, we have invested \$20 million in our fully integrated reverse osmosis (RO) water treatment facility, the first of its kind in Australia.

The plant can treat up to 12 million litres of water a day and we will use this technology in a plant under construction at our Talinga gas field.

Options for water use to be investigated as part of the EIS process include;

- Irrigation of agricultural crops
- Agro-forestry and tree-cropping
- Urban and industrial uses
- Interim or occasional surpluses of treated water discharged to local river systems
- Reinjection into suitable aquifers

ConocoPhillips

APLNG is a CSG to LNG Joint Venture between Origin and ConocoPhillips
